

“Designing Construction Contracts Algorithm” Training Program

Participants will gain a background in the legal aspects related to the construction contracts, building construction contract database, and integrating Construction contracts with other activities done by any firm. This 10 hours course leads you to be able to write a comprehensive construction Contract in such a way as if a professional engineer/lawyer, according to all international accepted methodologies, and using various general conditions, wrote it.

All attendees shall be entered automatically in a newsgroup to always update their knowledge in this field.

Course Length: 10 Hours @ 4 days

Course Attendee

- Engineers from all discipline especially those working in the field of construction.
- Lawyers especially those working in the field of construction.
- Students in both faculty of engineering and faculty of law.

Course Outline

- What is the Construction Contract Algorithm?
 - Legal Definition.
 - The algorithm.
 - CSI approach.
- Selecting contract variables.
- Embedding variables.
- Applying a construction contract on a specific project.
- Project.
